

## Sling Draws

Sling draws are a very useful addition to quickdraws in that they can quickly be used in many different lengths.

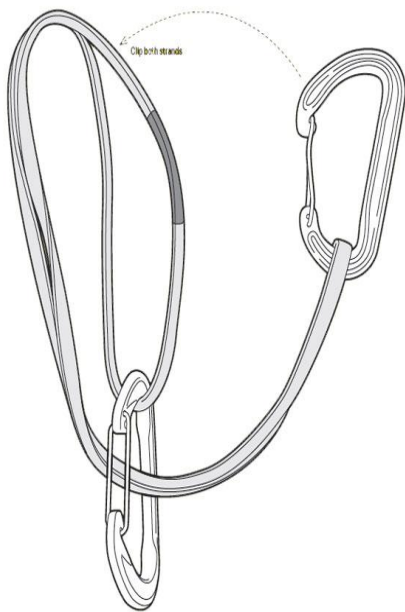

What you need:

1x 60cm sling

2 x springgate karabiners in different colours, preferable the same as your quickdraws so you know which one goes on the gear and which on the rope.

How to rack a slingdraw;

Pass one karabiner thro the other then clip it to back onto both strands.

So that it can now be racked on your harness.

It can be used in this length or extended to two different lengths by:

Take two strands from one karabiner so it extends to the full 60cm.

Or with a little practice,

Take one strand off to make a sling of about 27cm long.
